

Bio Bloco

Solid block
self-dosing for
treatment
biological effluent

Treat the environment, naturally!

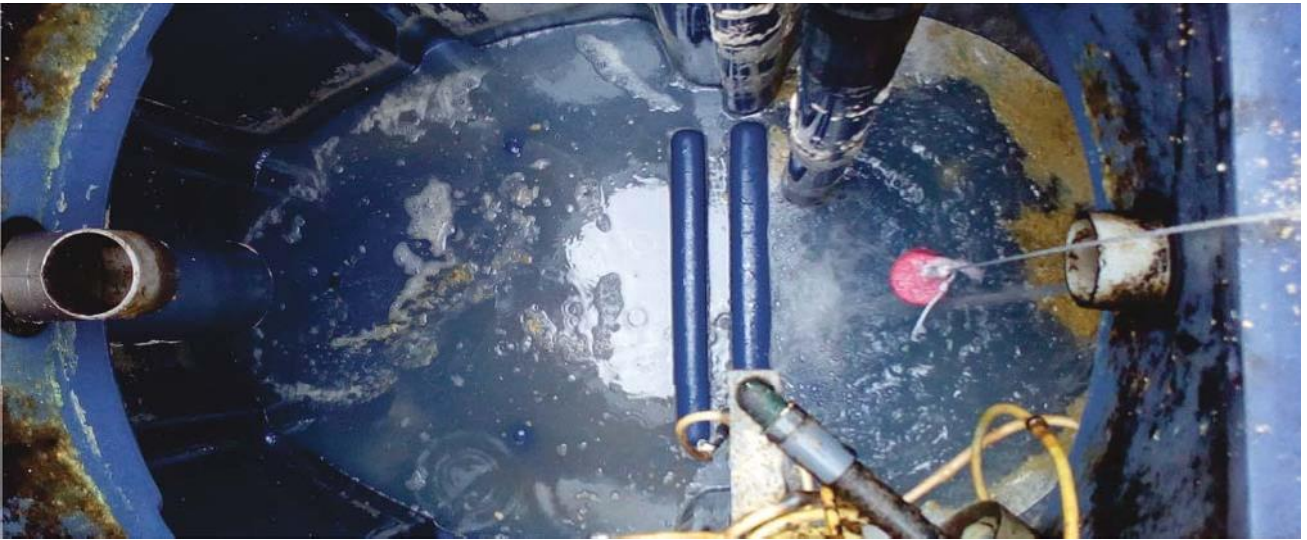

The Bio Bloco WT contains a high concentration of natural microorganisms that are released constantly and gradually by passing through water, degrading the most resistant organic compounds.

It uses bacteria of natural origin, non-toxic and non-pathogenic, very safe that reduce odors and accumulations of sludge, oils and fats in O&G separators and septic tanks.

The Bio Bloco lasts on average 30 to 60 days, depending on different local conditions.

Indicated for:

- Treatment of grease traps in restaurants, hotels and shopping centers.
- Maintenance of septic tanks in homes, industrial or commercial facilities.
- Treatment of industrial and municipal effluents, including pumping stations.
- Elimination of odors by digestion of organic residues and fats that are at their origin.

Advantages of Bio Bloco WT:

- Eliminate the need to invest in expensive equipment (such as dosers), normally used with liquid products.
- It's a biological product and therefore completely biodegradable, safe and non-aggressive to users, equipment and the environment.
- Allow continuous treatment 24 hours a day.
- Reduces the working time required to maintain systems.
- Eliminates bad odors coming from grease traps and septic tanks.
- Reduces the accumulation of organic compounds in septic tanks and grease separators.
- Prevents system clogging and its consequences.

Example of Fat Separator at the beginning of biological treatment and 20 days later

The results in Grease Separators are visible even to the naked eye, felt in terms of reduction/elimination of bad odors and parasites and confirmed through laboratory analyses.

The Bio Blocos WT avoid the need for frequent cleaning of grease separators and can eliminate up to 90% of oils and fats that would otherwise be released into the sewage system.
